Solutions Customization: Monitoring Application System

BALAI MONITORING SYSTEM	PRINTER STATUS MONITORING SYSTEM	CAD SYNCHRONIZER APPLICATION (CADSA)
Automate the information gathering and real-time data display on all Balai Bomba connectivity to the MERS 999. Data collected directly from the database and displayed in a web-based application. Assist the end users to smoothen their daily emergency dispatching task and resource monitoring especially during critical situations.	Automate the printing job for the assigned cases/callcards at the respective Balai Bomba. All initial information gathered on the emergency cases were collected directly from the database and automatically printed-out at the assigned Balai Bomba. Ensures a more efficient and effective emergency handling to be done with proper documentation.	Real-time synchronization job between three (3) Response Centre's (RC) databases and three (3) Service Technology Centre's (STC) databases on the connectivity of all sites under them. Backend checking done simultaneously between all databases and displayed all information on a web-based application. Provides reliable and accurate information for dispatching tasks to be conducted by the agencies.
